

Fixed Asset Management Program FAMP 11.0

Feature Benefits of New Released FAMP 11.0 Software

1. Tracking the Movement of Assets

FAMP 11.0 now allow you to track your assets as they move from one location to another. The system captures and stores previous location assets. We have also added a “location change report” that conveniently displays the current and prior location for assets that have moved.

2. Improved Reporting on Filtered Data

FAMP 11.0 reports now display, in the report heading, the filter used to select a subset of data when a report is prepared. This enhancement removes any confusion how the report was generated.

3. Improved Search Capability

FAMP 11.0 allow you to “clone” search queries without having to manually construct each search. For example, if you’re searching for 5 barcode numbers, you now enter the initial filter criteria and click on “clone” 4 times and just go back and change the barcode numbers.

4. Navigating the Transaction Log

FAMP 11.0 now allow you to filter the Transaction Log when searching for specific entries. You no longer have to scroll through thousands of entries to find the transaction that effected the item you are researching.

5. Simplified Process for Moving Group Count Items to New Locations

You can now easily transfer items that are “group counted” between rooms. For example, if room A has 10 chairs and you need to move 4 chairs to room B, you are now prompted to enter the number of items moving and the program will allow you to move the 4 chairs to room B, leave the remaining 6 chairs in room A.

6. Easy Maintenance of Multiple Fund Option

FAMP 11.0 now allow you to maintain your own multiple fund options in the master maintenance. Prior to the upgrade, you had to send your database and changes to RCI and we manually made the updates for you. *This new feature saves everyone time and money.*

7. Improved Import Capability for Serial Numbers

FAMP 11.0 now allow you to import serial numbers up to 50 characters. Many computers and other types of equipment have serial numbers longer than the previous limit of 20 characters. This allows you to import larger serial numbers without having to go back in the inventory data entry screen and manually add the missing numbers.
